Description of the Manulife Risk Meter

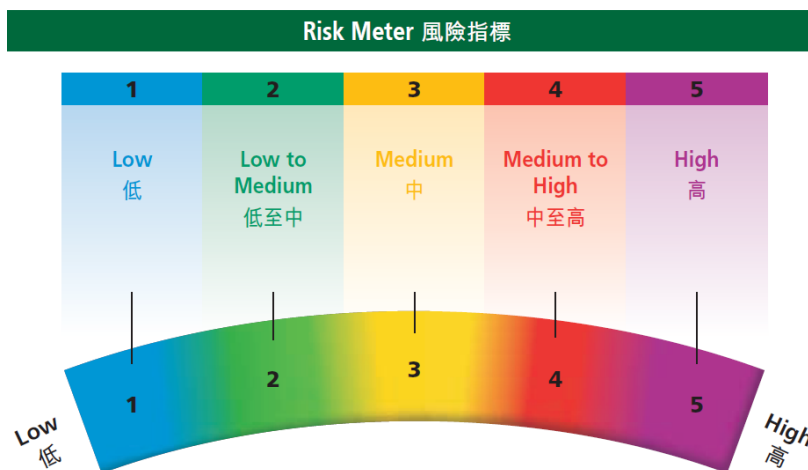

The risk level is represented by the Manulife Risk Meter, a 5-level risk continuum from 1 to 5, which shows the variation in the net asset value of the sub-fund in a specified period of time. The more sensitive a sub-fund is to the change of market conditions, the more volatile it is and therefore the higher its risk level is indicated by the Manulife Risk Meter. Likewise, a sub-fund less sensitive to market condition changes has lower volatility and is therefore regarded as bearing lower risk on the Manulife Risk Meter.

You may refer to the Manulife Risk Meter in selecting sub-fund(s) that suit(s) your own risk profile. Each risk level approximately reflects the corresponding risk profile as follows:

有關宏利風險指標

風險水平由一個具有五個級別的宏利風險指標表示，以顯示在特定時間內子基金單位資產淨值的變動。當宏利風險指標內所標示的風險級別愈高，就代表該子基金對市場狀況的轉變愈敏感，波幅愈大；相反，當宏利風險指標內所標示的風險級別愈低，該子基金對市場狀況的轉變愈不敏感，波幅愈細。

客戶可根據宏利風險指標選擇適合其風險取向的子基金。每個風險級別大致反映以下的風險承受水平：

Remarks:

The 5 risk levels in the Manulife Risk Meter are determined on the basis of a number of factors relating to the underlying investments of sub-funds, including the types of asset classes and their respective target weightings, the breadth and geography of diversification, the historical long-term volatility and capitalisation of the relevant markets and the presence of any guaranteed investment returns..

A risk level is assigned principally based on the historical volatility of the sub-fund or the market index relevant to the sub-fund and ranked against the volatility of the authorized funds in Hong Kong. The 5 risk levels in the Manulife Risk Meter are measured by using 36-month data from independent investment research results released in the past twelve months.

Please note that the volatility and the risk level of a sub-fund may change over time and the future market volatility may not follow the historical volatility. The composition of the underlying investments of each sub-fund may be different from that of the referenced market index. The Manulife Risk Meter will be reviewed and updated from time to time. The greater the diversification and the more stable the underlying assets, the less volatility will be experienced by the sub-fund.

Higher possible gains generally imply higher possible losses. The lowest risk level does not mean risk-free

註解：

宏利風險指標內五個風險級別的釐定，乃基於多項因素，包括子基金旗下資產類別及其相應的目標比重、投資項目的覆蓋範圍及地域分布、有關市場過往的長期波幅及資本總額和子基金有否提供回報保證。

風險級別是基於子基金或與子基金相關的市場指數的過往波幅作釐定基礎，並與本港認可基金的波幅作比較及排序。現時宏利風險指標內的五個風險級別，是根據獨立投資研究於過去十二個月發布的三十六個月數據而釐定。

請注意子基金的波幅及風險級別或會因時不同，將來波幅未必跟隨過往幅度。每隻子基金的旗下實際投資項目成分與相關市場指數或有不同。宏利風險指標將不時進行檢討及更新。

子基金的投資愈分散及相關資產穩定性愈高，其波幅也將相對較低。

較高回報潛力一般意味較高的虧損機會，而最低風險級別並非代表沒有風險。

The 5-level risk categorization is provided by Manulife Asset Management (Hong Kong) Limited.

Information in this description of the Manulife Risk Meter should not be regarded as investment advice on, an offer to sell, or a solicitation for an offer to purchase any financial products and services. Neither should such information be regarded as a substitute for professional advice.
